

Climate Engineering Teaching Module

Lesson 3: Climate Engineering Designs Worksheet-reflection about the engineering process

Introduction

The guiding questions here are to help you to reflect on the engineering process you've gone through.

1. What is the big idea of your project – How does it work? How did you or your group get this idea? Why do you think it is important?
2. Why did you choose this design over others?
3. What challenges did they have when choosing, making and drawing the design? How did your team overcome those challenges? How did you feel?
4. What improvements/changes do you want to make if you have the opportunity to do it again?
